

■ Subtie Version 1.0.0 — Official Recovery Guide

Application Snapshot & Step-by-Step Restoration Manual | Repository: [msoms-ai/subtie](#)

VERSION 1.0.0 STABLE SNAPSHOT LOCKED

Subtie **Version 1.0.0** is permanently tagged on GitHub (commit 8893d5b). If future changes destroy or break your codebase or database, follow this guide to restore full operation in under 60 seconds.

1. Guaranteed Features in Version 1.0.0

- **MSOMS-Anime Heritage:** Full integration of MSOMS-Anime (est. 2000) legacy history in About modal.
- **Manga Gallery & Arabic Badges:** Filter tabs with Arabic category labels (Anime Episode, Movie, Trailer, Clip).
- **Gemini AI Engine:** Japanese speech ASR transcription and dual English/Arabic translation via gemini-flash-latest.
- **Dual-Engine Export:** High-contrast Export modal with pure white text on solid purple buttons, UTF-8 BOM (        ) formatting, and direct Blob / iFrame native downloads.

2. Step-by-Step Restoration Options

Option 1: Discard All Broken Code & Reset to v1.0.0 (Recommended) — Wipes broken code & restores v1.0.0

```
git fetch --all --tags && git reset --hard v1.0.0
```

Option 2: Create a Fresh Branch Starting From v1.0.0 — Creates clean branch off v1.0.0

```
git checkout -b fresh-v1-branch v1.0.0
```

Option 3: Restore Projects Database Snapshot (projects.json) — Restores all 8 original projects

```
cp server/data/projects.json.v1_backup server/data/projects.json
```

3. Launching the App & Version Metadata

```
npm install          # Install dependencies (if needed)
npm run server       # Start Express backend daemon (Port 3001)
npm run dev          # Start Vite frontend server (Port 5173)
# Open browser at: http://localhost:5173
```
